

**OPENSKY®  
P-801 AND  
P-800 LEATHER  
CASE WITH  
KEYPAD OPENING  
AND SWIVEL CLIP**

The case is made of black high-grade leather for maximum protection in rough environments. For extra security, a nylon strap holds the radio tight in the case. The case allows unobstructed access to the portable radio keypad (P-801), display unit, and all radio side controls, including the accessory connector. The rear of the case has a D-ring (swivel) that attaches to the belt loop. The case enters the belt loop upside down and is rotated 180° to assume the normal wearing position. This design prevents the encased radio from falling out of the belt loop but still allows the radio to rotate freely. The case includes hooks for the optional shoulder strap.

P5100, AND  
JAGUAR 700Pi  
AND 700P NYLON  
CASE WITH BELT  
LOOP/SWIVEL**

The soft and lightweight case, made of black or orange high-abrasive-resistant nylon, protects the radio without adding extra bulk. The international orange case is highly visible, which aids in locating it if dropped. An elastic strap holds the radio tight in the case for extra security. A transparent nylon cover provides easy access to the portable radio keypad and display unit, and cutouts allow access to PPT, OPT, and CLR control buttons. Non-slip rubber guards on the sides make holding the case easy, even when hands are wet. The case provides unobstructed access to the UDC accessory connector, eliminating the need to unhook the speaker mic before inserting and removing the radio from the case. The rear of the case has a D-ring (swivel) that attaches to the belt loop. The case enters the belt loop upside down and is rotated 180° to assume the normal wearing position. This design prevents the encased radio from falling out of the belt loop but still allows the radio to rotate freely.

**P7200, P7100<sup>IP</sup>, P5100, AND JAGUAR 700Pi AND 700P LEATHER CASE WITH BELT LOOP/SWIVEL**

The case is made of black high-grade leather for maximum protection in rough environments. For extra security, a D-ring (supplied) attached to the back of the radio mates with the inside of the case and an elastic strap holds the radio tight in the case. The case allows unobstructed access to the portable radio keypad, display unit, and all radio side controls, including the UDC accessory connector. The rear of the case has a D-ring (swivel) that attaches to the belt loop. The case enters the belt loop upside down and is rotated 180° to assume the normal wearing position. This design prevents the encased radio from falling out of the belt loop but still allows the radio to rotate freely.

**LPE-200 LEATHER CASE WITH BELT LOOP/SWIVEL**

The case is made of black high-grade leather for maximum protection in rough environments. For extra security, a D-ring (supplied) attached to the back of the radio mates with the inside of the case and a leather strap holds the antenna, forcing the radio down in the case. The case allows unobstructed access to the portable radio keypad, display unit, and all radio side controls, including the UDC accessory connector. The rear of the case has a D-ring (swivel) that attaches to the belt loop. The case enters the belt loop upside down and is rotated 180° to assume the normal wearing position. This design prevents the encased radio from falling out of the belt loop but still allows the radio to rotate freely. The case includes hooks for the optional shoulder strap.

## M-RK™ II LEATHER CASE

The case, which is for System and Scan M-RK II portables, is made of black high-grade leather to provide maximum protection in rough environments. For extra security, a D-ring (supplied) attached to the back of the radio mates with the inside of the case and an elastic

strap holds the antenna, forcing the radio down in the case. The case allows unobstructed access to the portable radio keypad, display unit, and all radio side controls, including the UDC accessory connector. The rear of the case has a D-ring (swivel) that attaches to the belt loop. The case enters the belt loop upside down and is rotated 180° to assume the normal wearing position. This design prevents the encased radio from falling out of the belt loop but still allows the radio to rotate freely. A leather flap snaps onto the casing to cover the exposed area of the radio. The flap has cutouts for the volume control button, antenna, display unit, and keypad.
